PROFESSIONAL EXPERIENCE

Wells Fargo

Chandler, AZ

Software Engineering Associate

January 2024 - Present

- Shipped a modernized internal application from start to finish using Java Spring Boot and React TypeScript. Built 4 RESTful APIs with JUnit and Karate tests and developed 6 frontend pages and 8 reusable React components with Jest and Playwright tests. Continue supporting production enhancements and maintenance.
- Refactored the initial Playwright test suite of 81 automated tests for a 35,000+ line codebase, resolving flaky tests caused by premature assertions and data race conditions during parallel execution. Improved test maintainability, reliability, and readiness for HyperExecute and Harness deployment pipelines while reducing CI/CD slowdowns caused by unnecessary test reruns from false positives.
- Drove investigation, remediation, and validation of Severity 1 and Severity 2 security vulnerabilities identified through AI-assisted security scans across two large-scale enterprise applications. Performed root cause analysis and implemented secure code fixes using internal MCP servers, AI-assisted workflows, and prompt engineering techniques, strengthening application security and supporting an ongoing company-wide remediation initiative.
- Took project ownership across full-stack components, managing CI/CD release workflows using GitHub Actions, release branching, and Harness deployments, while coordinating production releases through Change Requests in ServiceNow, including implementation plans, rollback strategies, and release documentation.

We2Link

Los Angeles, CA

Full Stack Software Engineer Intern

August 2022 - May 2023

- Migrated a React Native application to a web-based platform using React TypeScript, Tailwind CSS, and Firebase by building 5 React components and an accessibility settings page.
- Used Jira to track user stories and collaborated on GitHub pull requests to ensure code quality, stability, and adherence to best coding practices, improving release stability by reducing production defects by 50%.
- Assisted in preparing comprehensive reports, software documentation, and presentations for potential investors under the guidance of the We2Link staff.

Johnson and Johnson

Los Angeles, CA

Technology Intern

June 2022 - August 2022

- Shaped the Strategic Customer Group website by crafting agile user stories in Jira through collaborative discussions with 4 tech leads and 2 stakeholders to capture business requirements and ensure top-notch UI/UX design.
- Led Ponvory SharePoint site development, guiding brand integration, strategizing structure, and enhancing user experience with existing UI, while aligning it with the brand identity.
- Pulled data with Google Analytics. Developed 2 Google Data Studio dashboards to analyze metrics before and after a website redesign. Led a demo for leadership, business teams, and stakeholders to support future decision-making.

Texas Advanced Computing Center (TACC)

Los Angeles, CA

Data Science Research Intern

August 2020 - May 2020

- Collaborated with 7 multidisciplinary team members to apply data science and computational methods to a social impact research project.
- Used Python's Matplotlib, Pandas, and NumPy libraries to parse CSV files, clean data, and initialize DataFrames. Created 4 effective and engaging data visualizations to support my research question.
- Ran, tracked, and stopped Jupyter Notebook jobs on TACC's supercomputers via the terminal.
